SUMMARY

B.Tech Computer Science student with a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming, and hands-on experience building full-stack, agentic AI platforms with Python, Node.js, React, LangChain, LangGraph, FastAPI, and Docker. Designed and shipped a production-style multi-agent SaaS platform with microservices, billing, and cloud storage. Solved 1000+ problems across coding platforms. Seeking Software Engineer / AI Engineer internship and fresher roles where I can apply agentic system design and full-stack development skills.

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript
Core CS: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, SDLC
Web & Databases: HTML, CSS, React.js, Redux, MongoDB, SQL, PostgreSQL
Backend: Node.js, Express.js, FastAPI, REST API Development, Microservices, Firebase Auth, Razorpay, MERN Stack
AI / GenAI: Machine Learning, Deep Learning, LangChain, LangGraph, LangSmith, MCP, NLP, Agentic RAG, Vector Databases, N8N
Cloud & DevOps: AWS (EC2, S3, Application Load Balancer), Docker, Docker Compose, CI/CD Pipeline, Linux
Tools: Git, GitHub, Postman, Streamlit

PROJECTS

CortexAI — Multi-Agent AI SaaS Platform — *Node.js*, *React*, *LangGraph*, *Docker*, *Firebase*, *Razorpay*, *AWS S3*, *MongoDB* | GitHub

- Architected and built a production-style, full-stack multi-agent AI platform using a microservices architecture — independent gateway, agent, auth, billing, and chat services, each containerized with Docker and deployed on AWS EC2 behind an Application Load Balancer for traffic distribution across services.
- Designed a LangGraph-based multi-agent orchestration engine with dynamic routing and state management across 8 specialized agents (chat, coding, image, PDF, PDF-RAG, PPT, search, vision), integrating multiple LLM providers, vector databases, and Tavily search for retrieval-augmented, context-aware responses.
- Built a billing service with Razorpay payment integration and credit-based usage metering, Google OAuth via Firebase authentication at the API gateway, AWS S3 file storage, and automated PDF/PPT report generation, backed by a responsive React + Redux chat frontend.

Stock Analyst — *Python*, *LangGraph*, *Groq LLM*, *Streamlit* | GitHub

- Engineered an AI-powered financial intelligence platform that automatically generates investment research reports for global equities.
- Architected a multi-agent workflow using LangGraph, combining financial data retrieval with technical analysis pipelines for end-to-end report generation.
- Built an interactive Streamlit interface enabling real-time user interaction and on-demand report generation.

AI Deep Research Agent — *LangGraph*, *LangChain*, *Groq LLM*, *Tavily Search* | GitHub

- Developed an autonomous research agent capable of iterative web exploration and multi-source information synthesis.
- Integrated Groq LLM and the Tavily Search API to enable high-speed inference and structured information retrieval.
- Designed a Streamlit dashboard providing efficient access to AI-generated research reports.

EDUCATION

Raj Kumar Goel Institute of Technology — Ghaziabad, Uttar Pradesh
Bachelor of Technology, Computer Science & Engineering — CGPA: 7.86/10 | Expected Graduation: 2027

ACHIEVEMENTS & RECOGNITION

- Solved 1000+ Data Structures & Algorithms problems across coding platforms.
- LeetCode: Rating 1684; ranked in the top 20% (1,000 of 15,000+) in LeetCode Biweekly Contest 92 — profile.
- Member, Binary Club — managed a team of 50+ members and led club operations.
- Secured 2nd place in the college-level coding competition "Error Hunt."
- Participated in ByteVerse 7.0 Hackathon (NIT Patna) and Power Blitz, a Power BI hackathon.
